HEIGHT SAFETY

Did you know...?

By law all height safety equipment needs to be inspected on a regular basis (in most cases every 6 months). Not just anyone can conduct these inspections. The Regulations require that **competent**, trained and experienced persons with knowledge and skills in inspection of height safety equipment conduct these inspections. SRE have **internationally qualified inspectors** ready to come to you.

What does Legislation say?

OSH Regulation 3.51 requires that fall injury prevention systems be inspected at regular intervals by a competent person.

AS/NZS 1891.4 states that harnesses, lanyards and fall arrest devices should be inspected at intervals not exceeding 6 months.

OSH Regulation 3.53 requires that permanent anchorage points be inspected at intervals not exceeding 6 months

Call today to book

Why inspect?

Harness, lanyards and permanently installed systems are effective in minimising the risk of working at heights. To do this properly they must be in good working order. To find out more about this or to arrange an inspection call one of our friendly staff on

(08) 9412 8700

Mobile service vehicles means inspections can be conducted on your site

INSPECTIONS

Safety & Rescue **EQUIPMENT** Pty Ltd

Do I need a height safety system on my roof? What does Legislation say?

OSH Regulation 3.49 requires that each risk of falling from height be identified, assessed and reduced accordingly.

OSH Regulation 3.55 requires that if persons can fall 3mtrs or more, from a roof either edge protection (guardrails) or a fall injury prevention system (harnesses, anchor points, static lines etc) must be used.

Anchor Points, Ladders, Static Lines, Guardrails, Platforms, Stairs.

Tagging

SRE has refined the tagging of equipment. Insecurity of tags was the major problem in the past. This has been overcome with the introduction of SRE's new ratchet tag / Log record.
